We see a Future in Their Future

Skills Development
Networking
Work Experience
Mental Well-Being

Our youth are full of potential. With the world of work changing, we need to help ensure that they’re prepared for what’s next. That’s why we created RBC Future Launch, a program that increases access to skill development, networking opportunities and work experience, empowering the youth of today for the jobs of tomorrow.

rbc.com/futurelaunch

RBC Future Launch
Empowering the youth of today for the jobs of tomorrow.
TOMORROW IS NOW

There’s a lot in the news about how technology and artificial intelligence are changing the future of work. Yes, you’ll be impacted by changing workplaces. But here’s the thing — you’ll also be leading those changes. Relevance 2020 is all about owning your future.

How? By exploring different types of training and blurring the lines between career titles. And by staying open to learning new skills, and then learning different skills, and then learning more new skills.

Our peers share stories about chasing their dreams, discovering unexpected opportunities and finding success in ways they never imagined in high school. That’s the thing about life . . . it’s never a straight path, because every day brings new opportunities. Our peer mentors share insights and lessons learned to help you navigate the choices.

Check out our updated (and expanded) 2020 Saskatchewan Job Chart. You’ll find information on hundreds of career options, including educational paths, wage estimates, employment prospects and key skills.

We’ve also crammed as much information on career trends, work skills, educational paths and student resources as we could fit into these 52 pages. Use Relevance 2020 as a starting point to explore your post-secondary and career options.

Your tomorrow starts right here, right now.

Minister’s Message

Saskatchewan has had one of the best performing labour markets in Canada over the past decade, hitting record high employment levels and low unemployment rates. This growth has generated an abundance of rewarding career opportunities across many different sectors, from agriculture to manufacturing, oil and gas to health care, arts and culture to information technology. No matter what career path you want to take, you’ll find it in Saskatchewan.

Our government is ensuring Saskatchewan continues to grow by maintaining an attractive economic climate, and by creating training and education pathways to careers in the province. The future of our province depends on young people investing in their skills and planning their careers here in Saskatchewan.

The Government of Saskatchewan is proud to partner with the Saskatoon Industry-Education Council (SIEC) to help ensure the next generation of our labour force has what it needs to succeed. Our government is grateful for the commendable work SIEC has done to prepare youth to make informed choices about their education and career options, and realize their full potential. We look forward to continuing this relationship. I am also thankful for the educators across the province who make a professional and personal commitment to equip students with the skills and confidence they need to progress to the next stage of their lives. Together, we are building a stronger Saskatchewan for generations to come.

Sincerely,

Honourable Jeremy Harrison
Minister Responsible for Immigration and Career Training

Thank You!

Relevance Magazine is produced by the Saskatoon Industry-Education Council. We would like to thank the Saskatchewan Ministry of Immigration and Career Training and our post-secondary institutions for their long-term support. We would also like to acknowledge the individuals who help make Relevance possible, led by Janet Uchacz-Hart and Shana Stewart, Saskatoon Industry-Education Council, Tanveer Islam, Ministry of Immigration and Career Training (Job Chart), Chad Hein (designer), Liam Richards, Electric Umbrella (photography) and Bev Fast (writer/editor). Sincere thanks to the SATCC, our regional colleges, universities and businesses for their financial assistance and provision of materials. And of course, thank you to our peer and mentor profiles for once again sharing their experiences, stories and tips in this year’s publication.

for more information go to www.saskatooniec.ca/relevance
You’ve probably heard it a million times—the future of work is changing (cue sound effects: dun, dun, DUN!). Change scares people, but don’t let it scare you. The future of work is changing, but it’s changing in some pretty exciting ways. The key to having a successful career is being willing to go with the flow of change. We asked our Relevance 2020 peers and mentors for tips on how to grow your career, your future, your way.

Be true to you.
Neal Kewistep was brought up to value his Indigenous identity, and that identity defines how he carries himself at work and in the world. “Indigenous young people often feel conflicted, as if we have to choose to be Indigenous at work or leave it at the door. Our Indigeneity is part of us, it shouldn’t be compromised at work. It only recently dawned on me how close I came to losing my language and culture. I don’t possess my language, but I’m close to my culture, and my culture makes me reflect on how I live Indigenous ways of being, including at work.”

Find your mentors
Just about every Relevance peer and mentor we’ve interviewed over the last 12 years has said the same thing—find mentors. But who are mentors and how do you find them? It’s easier than you think, because potential mentors are all around you. It might be your high school math teacher, your track coach, your apprenticeship journeyperson, your favourite university prof.

“I’ve had so many wonderful mentors in my life. Even now, when I’ve moved into mentoring roles myself, I still see myself as a protégé,” says Rachelle Brockman, one of our 2020 mentors. “I’ve found that I really love having young mentors. They help me stay open to change and to be more aware of labels and ‘isms,’ like sexism and ageism.”

Rachelle continues to pay it forward, as a public speaker and facilitator of “eureka experiences” and a leader in the Edwards School of Business Womentorship Program.

Growing up, the people around us give us gifts—teachings—not all of them are good. Just remember, you don’t have to accept every gift.
Do what you love.

It’s a cliché. You know it and we know it. Not everyone is passionate about a particular career. But some of you are. Some of you know exactly what you want to do and who you want to be, even if you’re not sure how you’re going to get there, at least not yet.

That’s how it was for Austin Grass. He knew at 15 that he wanted a career in film, even if he didn’t realize until university that he wanted to be a camera operator. Once he had a focus, he jumped on every opportunity. He added a minor in photography to his degree, volunteered to gain experience, used a class project to create a short film, and scoured social media for opportunities.

When a friend called and said Montreal was the place to be, Austin packed up his car and drove 36 hours across country to pursue his dream. Since 2016, he’s worked as a camera operator on national commercials, as a camera trainee on Hollywood films, as a first and second assistant camera operator on true crime TV series . . . and his career is just revving up. “I wake up super happy every day,” he says. “It’s incredible making decent money doing a job that doesn’t feel like work to me, because I love it so much.”

Keep learning.

If there’s one thing the experts agree on, it’s that the future of work will demand lifelong learning. Fear not, this doesn’t mean you’ll spend half your life in a classroom. But you should expect to upskill and reskill throughout your career. You might go back to school for a different degree or diploma, but you might also take online courses, professional development workshops and short-term certificate programs.

Ali Abukar’s career to date is a good example of the benefits of upskilling. As an 18-year-old Somali refugee in Egypt, he needed an education to survive. He started by getting an English proficiency certificate, which opened the door to work as a tutor and interpreter. With the help of family and refugee supports, he was able to keep learning. He got a bachelor’s degree in business administration at the Arab Open University. Double graduate diplomas in migration & refugee studies and psycho-social interventions for forced migrants and refugees at the American University in Cairo let him push his career in a new direction, and he followed this with a master’s in social work from Wilfred Laurier University in Ontario. He hasn’t stopped there; since becoming CEO of the Saskatoon Open Door Society, Ali has taken leadership training at the University of Saskatchewan and non-profit management studies at Mount Royal University in Calgary.

A high school diploma isn’t enough anymore—you need some kind of post-secondary education, maybe different kinds over your career.

Your career is not you.

Omayra Issa is a journalist with the CBC. It’s a high-profile career, but she’s careful not to identify too closely with the job title. Partly because she’s aware of the changing nature of the news profession, partly because she’s also a public speaker, moderator and facilitator who engages communities to tell their stories, and partly because she’s learned through experience that it’s easy to become your work.

“When we’re young, there’s more pressure to compare ourselves, to compete. It can be destructive,” she says. “It’s important to have standards for ourselves and to try our best to meet those standards, but be the best you can be for yourself, not others. That’s why I push myself, that’s what inspires me.”

Go out on a high note as a member of the Saskatchewan Rattlers. The team won the first-ever Canadian Elite Basketball League Championship in front of a hometown crowd in August 2019.

Team practice no longer dominates Michael’s life, but he has no problem staying busy. He’s the founder of Prime Basketball Development, a company that teaches basketball players what it takes to become champions, on and off the court. He’s also an elected councillor for Thunderchild First Nation, a public speaker, a representative for Nike N7, a business owner, a community leader, a family man and a part-time university student.

The thing is, Michael left university to play pro ball before he finished his degree. You might wonder, why finish now, ten years later? “For me, having a degree is just a piece of paper. My great aunt doesn’t have a degree and she’s one of the most intelligent people I’ve ever met,” he says. “But I want to finish what I started, for myself and for my kids. I don’t want to feel like a hypocrite when I tell kids to get more education when I didn’t finish.”

Omayra Issa
Journalist & Public Speaker

You need to keep a bit of distance between who you are and what you do.

Never say never.

When Michael Linklater retired from professional basketball last year, he was lucky enough to go out on a high note as a member of the Saskatchewan Rattlers. The team won the first-ever Canadian Elite Basketball League Championship in front of a hometown crowd in August 2019.

When something isn’t feeling right, instead of brushing it aside, figure out where the feelings stem from and work on that.

Ali Abukar
CEO, Saskatoon Open Door Society

A high school diploma isn’t enough anymore—you need some kind of post-secondary education, maybe different kinds over your career.

Peer Profile

Omayra ISSA
“I come from a family of strong women.”

As a reporter with the CBC since 2014, Omayra has covered a lot of stories, from the Humboldt Broncos tragedy to the La Loche shooting. But Omayra also has her own story to tell. She’s fluent in five languages, has been named one of Canada’s top 100 Black Women to watch and was nominated for a YWCA Women of Distinction Award. She’s not afraid to challenge comfort zones in order to start open conversations about race, gender, sexuality and social engagement.

Where did you grow up?
Niger, West Africa. My dad worked for a uranium company, which is what brought us to Saskatoon. We moved here when I was 16.

What’s it like moving to a new country?
Massive culture shock! We arrived in November, and it was so cold that when we came out of the airport, we wanted to run right back in. And then there was the language barrier—I only had basic English, so I had to learn quickly.

Was it tough fitting in?
It was. I was fluent in French, so I was enrolled in Grade 11 at École Canadienne-Française. I started a student newspaper at my school as a way to bond with classmates.

Why a school newspaper?
It gave me a way to exist in a world I found strange and intimidating. In my family, the news was important, it connected us to the rest of the world.

Did you take journalism at university?
Actually, I took economics and English literature. I wanted to be a lawyer. My aunt and grandpa were lawyers. Human rights were a big interest in our family—my grandma was very involved in women’s rights. I think that’s why journalism comes naturally; I was raised in a family that was interested in human stories.

So how did you get into journalism?
I was working for an organization that led community projects, and the CBC French language service would call me for a comment. They started asking me to provide commentary, and then, they asked me to comment on the provincial budget. That was big. It went well, so I asked if they’d be interested in other commentary—basically, I pitched myself to the CBC.

And they hired you?
Not quite. They asked if I was interested in being a researcher and I said no, because I was finishing my bachelor’s degree. The day I handed in my last paper, I let them know I was available. After that, my career just unfolded.

Do you encounter racism?
Oh yes. Being a black woman on the prairies is not easy, even though I’ve lived almost half my life here.

How do you deal with it?
I was raised to respect myself. I come from a family of strong women—my mom, my grandmother, my aunts. I don’t let what other people say define me. I stand firm in my identity.

How can society deal with it?
We need to be able to talk about race without the stigma of racism. We need to have those tough conversations, and discomfort is going to be part of that. I also think we need to honour our differences. We shouldn’t have to be the same.

Where do you see yourself in 10 years?
I would like my journalism to be internationally known. I was asked to moderate a panel on energy during the 2019 African Union Summit in Niger. It was amazing. It showed me the value of storytelling in connecting people at a global level.

“Believe in yourself. Believe that your story matters, that you have a voice and a place in the world.”

GETTING THE STORY
Career opportunities in communications are about as diverse as you can imagine. If you’re interested in in-depth documentary and investigative journalism, check out the University of Regina’s School of Journalism (urjschool.ca). Indian Communication Arts at First Nations University prepares you for jobs in Indigenous and mainstream media and public relations (fnuniv.ca/a-programs). Media Production at Saskatchewan Polytechnic offers cutting-edge training in the “how-to” of content creation (saskpolytech.ca/about/school-of-information-and-communications-technology). For a broader learning canvas, explore a bachelor of arts degree from the University of Saskatchewan (artsandscience.usask.ca).
Here today, Gone tomorrow. USask researchers are documenting the alarming deterioration of the Athabasca Glacier, and the world’s fresh water supplies from a uniquely Saskatchewan perspective.

Visit ThinkSask.ca/work/technologycareers for more information about the exciting jobs in the province’s tech sector.

By 2030, six out of 10 of your classmates will be working in jobs that don't exist today. **Cool, right?** Except ... how do you prepare for a job that doesn't exist yet?

Easy. Focus on developing your career superpowers, a.k.a., your skills. Your success is about building people skills, communication skills, digital skills and information seeking skills. It's about resilience and learning how to adapt in the face of change so you can thrive in the workplaces of tomorrow. Our peers and mentors share their insights on the skills you need to succeed.

### Superpowers

**By 2030, six out of 10 of your classmates will be working in jobs that don't exist today.**

**Cool, right?** Except ... how do you prepare for a job that doesn't exist yet? Easy. Focus on developing your career superpowers, a.k.a., your skills. Your success is about building people skills, communication skills, digital skills and information seeking skills. It's about resilience and learning how to adapt in the face of change so you can thrive in the workplaces of tomorrow. Our peers and mentors share their insights on the skills you need to succeed.

### #1 Superpower: Communication

Put communication in bold letters with exclamation marks after it. Communication is not just talking, it’s asking questions and listening to the answers. It’s more than texting and email, it’s being able to talk face to face. You need to understand eye contact, tone of voice, body language and words, because all these things together are part of communicating.

— Mentor Rachelle Brockman, principal, Eureka Experience

Good communicators aren’t born; it’s a skill everyone can learn. Sometimes, we develop bad habits and think it’s part of our persona, that we’re just not good communicators. But communication isn’t about who you are as a person, it’s a skill you practice and grow, just like you would practice soccer skills or music skills.

— Omayra Issa, CBC journalist & public speaker

### Superpower: Attitude

All of the nine essential skills come into play for me as a welder. But one thing this last year of training for WorldSkills taught me is that a positive attitude counts. At Skills competitions, everyone is trying to be the best they can be. At that level, you can’t leave things to chance, you have to put your best foot forward no matter what. I think that translates to the real world of work.

— Adam Sebastian, 3rd Year Apprentice Welder, WorldSkills Team Canada 2019

### Superpower: Flexibility

In my field, I think the ability to adapt and grow with change will become more and more important. Technology and workplace standards are constantly changing, which means new procedures and techniques. Science is always moving forward.

— Donalee Olynick, CLX technologist, Wadena Hospital

### Superpower: Learn from Mistakes

Don’t let mistakes rule you. I was raised to know that it was okay to make mistakes, but to learn from them, correct them and move on. Mistakes are teaching lessons.

— Omayra Issa, CBC journalist & public speaker

### Superpower: Being Human

With all the innovations in technology, I think it’s important to discover our humanity. The challenge of the tech world is that it connects us to faraway places, but disconnects us to close places, like friends, family and community. The beautiful gift we have as humans is that we are human. As humans, we are positioned to understand and deal with the issues and challenges of our world. It’s our responsibility to honour that gift to ourselves.

— Mentor Neal Kewistep, Executive-in-Residence, Johnson Shoyama Graduate School of Public Policy
Jordyn is passionate about a lot of things, and that passion has led to some amazing career opportunities. She’s met with Elders and community leaders across northern Saskatchewan, presented her idea for an Indigenous Youth Advisory Council at an international summit in England, explored clean energy options as a 20/20 Catalyst … and she’s just starting to find her voice.

What’s your background?
I’m a member of Black Lake First Nation, but I grew up in Ile-a-la-Crosse. I studied psychology at the University of Saskatchewan and fashion merchandising at the Blanche Macdonald Centre in Vancouver.

How was the transition to university?
Fun, but also culture shock. My chemistry class had 150 students—my entire high school graduating class was about 26. It made me realize what a sheltered little bird I was.

How did you handle the anxiety?
It helped that I was living with my three best friends and still involved in track & field. I competed in track all through high school; I won two gold medals at the North American Indigenous Games in 2008. At university, I stayed involved in coaching. It kept me grounded and focused on the future.

Are you still involved in track?
I’ve been on the board of the Saskatchewan Aboriginal Track & Field Association since high school. I have a huge passion for the organization and for the sport. We organize clinics in Indigenous communities and host an annual track meet. We had close to 500 people at the 2018 event; that makes us one of the biggest meets in the province.

How has your career evolved?
I started as a cognitive disability consultant in northwest Saskatchewan. After two years, I moved to Northlands College in La Ronge, first as a student recruitment officer and then as coordinator of community & cultural engagement. I travelled to 44 northern communities, meeting Elders and leaders, talking with youth, seeing all the different cultures—it was awesome.

What brought you to Saskatoon?
At Northlands, I was on the road 3 out of 5 days and I just needed a change. My high school coach, Derek Rope, invited me to join his company last January. We’re a First Nations consulting business that provides innovative approaches to community, economic and strategic partnership development.

What did working in the north teach you?
There’s a disconnect between education, jobs and life. A lot of youth in the north live on the land. There’s no certificate or degree for their traditional knowledge or skills, so it’s no wonder they’re not interested in industry-driven education. That’s what got me thinking about the Youth Advisory Council.

You’re also interested in a clean energy?
Yes, I’m involved in a clean energy project in my community through the 20/20 Catalyst program, which is part of the Indigenous Clean Energy network. I was one of 22 catalysts selected in 2019 to participate in week-long intensives in BC, NWT and Ontario, where we explore community-based clean energy options.

Looking for greener pastures?
Start by checking out environmental certificate, diploma and degree programs at the University of Saskatchewan (sens.usask.ca), University of Regina (uregina.ca/arts/environmental-studies), First Nations University (fnuniv.ca/a-programs), Saskatchewan Polytechnic (saskpolytech.ca/about/school-of-natural-resources-and-built-environment) and regional colleges.

The 20/20 Catalysts Program supports Indigenous communities embarking on clean energy projects. Working collaboratively with the guidance of Indigenous leaders and clean energy practitioners across the country, catalysts gain the skills they need to help their communities maximize the social and economic benefits of clean energy initiatives. Learn more at indigenouscleanenergy.com/2020-catalysts-program.
Adam SEBASTIAN
“I felt I had something to prove.”

If Adam told you he was a world class welder (which he won’t because he’s too modest), it would be the honest truth. Last August, he placed 9th out of 40 countries at the 2019 WorldSkills Competition in Kazan, Russia. Technically, that makes him one of the 10 best welders under 22 in the world. Talk about bragging rights.

How did you get involved in Skills competitions?
I entered a school competition at Saskatchewan Polytechnic. I was the underdog, but I went on to win. That led to the 2016 provincials, where I also won, and that led to nationals, where I didn’t do so good.

What happened at nationals?
I thought provincials was big, but nationals blew my mind. I was new to competition and made a rookie mistake—I misread the instructions.

Why compete in Skills again?
I felt like I had something to prove. Also, 2016 was a qualifying year for the 2017 WorldSkills competition. Seeing how much effort went into that really fired me up. I thought it would be amazing to represent my country.

Did you train?
Yes, I worked four 10-hour days at my apprentice job, then spent a day at Sask Polytech practicing. I went through the whole process again—I won the local and provincial competitions to move on to nationals, where I won the national Gold medal in my skill. It was the most amazing feeling I’ve ever had in my life.

And then off to WorldSkills?
No, 2017 wasn’t a qualifying year. I had to do it all again in 2018. But it all went to plan, and I was one of two welders chosen to compete for a spot on Team Canada. I spent almost a year training and battling it out with the other welder. It was intense. We had a weld-off at the 2019 nationals in Halifax, and I ended up winning.

Any perks being part of Skills Canada?
Having access to a trainer and expert, you learn so much. I also got to travel—Skills Canada pays for everything. My first international competition was in Huntsville, Alabama. I also went to Australia, where I had my first real look at some of the top WorldSkills countries—Japan, Russia, India. I placed third in both competitions.

Any lessons learned?
You think you’re good, and then you get to these international competitions and you see people who are even better. It’s intimidating, but it fires you up, too.

Tell us about WorldSkills.
The venue was so huge, you can’t even wrap your head around it. Over 1,300 competitors from 63 different countries. We stayed in our own Team Canada village. The opening ceremonies were ridiculous—you walk out with Team Canada and there are fireworks, dignitaries, a sell-out stadium crowd, 40,000 people cheering. Russia spared no expense; it was like the Olympics.

How did it go?
I came out with 9th place and a Medallion of Excellence. I was just 4 points off the podium, so it was close. It was a relief when it was done, but sad too, because you only get one chance at the Worlds.

What’s next?
A bit of rest, actually! I’m in my last year of apprenticeship, so I’ll finish up the school component and get my hours, then I’ll write the Red Seal exam. I’d definitely consider more schooling, like welding engineering technology.

Skills Canada brings out your best.
Imagine representing your country on the world stage, challenging yourself against the best of the best. The Olympics? Nope, it’s WorldSkills, and it’s a HUGE deal.

Skills Canada promotes careers in skilled trades and technology through annual provincial and national competitions. Competitions are open to high school and post-secondary students. Every 2 years, the two highest ranking participants in their trade at nationals compete in the WorldSkills selection process. These Team Canada “prospects” spend months in training and then go head-to-head at nationals to earn a coveted spot on WorldSkills Team Canada. 2020 is a WorldSkills qualifying year. Learn more at skillscanadasask and skillscompetencescanada.
YOU’LL LEARN BY DOING

The Polytechnic Advantage: Hands-on learning opportunities let you apply what you learn in the classroom to real-world situations. Depending on your program, you’ll reinforce your skills through labs, clinical placements, field investigations, outdoor camps, machinery time, workplace practicums and/or co-op work terms.

For more information, please visit us @ www.saskatooniec.ca
Skilled Trades and the Future of Work

Are robots and artificial intelligence going to replace skilled trades? Short answer: no. Long answer: some trades will fade (know any good blacksmiths?) and most will evolve along with technology. Brand new trades will emerge, too. The point is, there’s a good future in skilled trades, tomorrow and 20 years from tomorrow.

Apprentices spend approximately 85% of their time working on the job, learning from a certified journeyperson.

It’s not about gender
Male hairdressers, female bricklayers, male nurses, female hockey players ... your brain has already created labels, hasn’t it? We’re trained by society to do this, to think of women’s work and men’s work, pink collar and blue collar.

But why attach gender to careers? What would happen if we erased gender stereotypes and just looked at careers as skillsets?

Well, for one thing, we would have more guy teachers and nurses, more girl welders and IT analysts. It would open a lot of doors. You could follow your interests without worrying about being teased or stereotyped.

It’s not second best
Hey, it’s 2020. Why are we still fighting the stereotype of skilled trades as second best careers? Why do we still undervalue blue collar work and overvalue white collar work? Let’s hope your generation will bust these stereotypes.

Why is this important? Because according to the Canadian Apprenticeship Forum, Canada needs to add more than 167,000 new apprentices to the workforce by 2023.

No jobs out there? In the first quarter for 2019, Statistics Canada reported over 60,000 job vacancies in Red Seal trades.

Poor pay? According to Stats Canada, the average annual income across 18 different trades at the time of journeyperson certification was just over $51,000. Four years after certification, average annual income was $67,300. Do your homework; some trades are better paying than others.

They’re called “skilled” for a reason
Learning by doing is still the foundation of every skilled trade, from cook to welder. But “skilled” means just that. In addition to the 9 essential skills (see Career Superpowers on page 8), you need to master industry-specific applied skills.

The skilled trades also demand strong soft skills, things like problem-solving, critical thinking, creativity, collaboration and people skills. And like every other occupation today, digital literacy is a must. Don’t let the term intimidate you, it simply means you’re able to use a computer, tablet or smart phone to find, create, evaluate and share information.

Robots are not taking over
Robots are not taking over the skilled trades. AI-driven technology will definitely have an impact, but a leading think-tank says only 5% of all occupations across all industries have the potential to be completely replaced by robots.

It’s more like you’ll be working with AI-driven technology or working on AI-driven technology. That’s the flipside of technology: The more automated machines we have, the more skilled tradespeople we’ll need to fix them when they break down.

Canada needs to add more than 167,000 new apprentices to the workforce by 2023.

Start here
If you’re in high school, the Saskatchewan Youth Apprenticeship program will let you explore opportunities in the skilled trades (saskapprenticeship.ca/youth_apprentices).

If you’re getting ready to join the workforce, the Saskatchewan Apprenticeship and Trade Certification Commission website is your best source for info on becoming an apprentice (saskapprenticeship.ca).

5 TIPS FOR EXPLORING THE TRADES

1. Do your homework
Spend some time exploring different trades at saskapprenticeship.ca and careersins trades.ca. Which ones are you most interested in? Which have the best job prospects? What do they pay?

2. Keep your options open
Specialized trades often require industry-specific knowledge and skills. This can be a good thing, because you can become a specialist in your field and command top wages, but it can also narrow your job market. If you’d like more career flexibility, consider trades with transferrable skills.

3. Take a pre-employment program
Saskatchewan Polytechnic, Saskatchewan Indian Institute of Technologies, Gabriel Dumont Institute and Saskatchewan Regional Colleges all offer short (3-4 month) pre-employment programs in the skilled trades. It’s a great way to test drive a trade, while also building transferrable skills.

4. Become a niche area expert
Becoming the go-to expert in a niche area of your trade can provide a great foundation for career growth. It’s important to start by developing a broad set of skills, both industry-specific and transferrable. But if you see an opportunity to excel in one area (especially if you can earn a premium wage), get all the training and experience you can in that area.

5. Keep learning
After getting journeyperson certification, it might be tempting to close the books and just focus on work. But stay open to more training. Careers in skilled trades are evolving; as they evolve, new opportunities emerge — getting training in new areas will help make your career recession-proof (and robot proof). Check out the full article at talentegg.ca/incubator/2016/03/07/selecting-skilled-trade-7-mind.
Wanted: skill seekers.

Discover the benefits of a career in the skilled trades with SK Youth Apprenticeship.

There's a reason why Saskatchewan Polytechnic has a consistently high grad employment rate, and why we score top marks with employers.

Our focus on applied learning develops marketable skills that prepare you to contribute from Day 1 on the job. The blend of knowledge, skills and experience you’ll acquire here is a big advantage in today's market.

For more information go to www.saskatooniec.ca/relevance
Donalee is a country girl at heart, so when she discovered a post-secondary program that would let her grow her career in a rural area, she didn’t hesitate.

What do you do?
I’m a CLXT, or combined laboratory and x-ray technologist, at Wadena Hospital. Wadena is a small rural centre about 2½ hours away from Saskatoon or Regina.

Why Wadena?
I grew up on a farm just outside of Wadena. My dad cattle/grain farms and my mom is a special care aide. Now I live on a farm near Quill Lake with my husband, who’s also a farmer, and our 9-month-old son.

What’s the job about?
I take people’s blood and analyze it in the lab; I take X-rays to provide doctors with information they need to make patient diagnoses. I also take electrocardiograms, which is a tracing of the heart’s electrical current.

How did you choose this career?
I was attracted to health care at a very young age. Science, biology and the way the human body worked always intrigued me. Many of my family members had some sort of health care career, and that inspired me as well.

How did you decide on medical diagnostics?
I tried education at university, but realized it wasn’t for me, so I started work at the Wadena Medical Clinic. That’s where lab and X-ray technology became part of my life. I grew more interested in the tools physicians used to help diagnose patients, and from then on, I wanted to learn more.

Why the CLXT program?
It was a career focused in a rural setting. It also attracted me because CLXTs are in high demand; I knew I wouldn’t have trouble finding a job after completing the program.

How was the transition to post-secondary?
The biggest challenges were moving away from my family and the intense workload. Longer school days, more homework, and it was all on you to make it work for your future. It was scary and exciting all at once.

Did you look for a job near home?
Yes, it was important to me to return to a rural area. I wanted to be able to provide a service to the community I grew up in. Rural communities need to be promoted—they’re the heart of Saskatchewan.

What do you love about your job?
That every day is different. There are always new medical cases that test your knowledge or teach you something completely new. It makes each day interesting. We’re also part of a crucial team that helps doctors diagnose patients—that’s very rewarding.

Biggest challenges?
The long hours you sometimes have to work and the emotional strain you face working with sick or injured patients and their families.

What are your strongest skills?
I think one of my strongest skills is the ability to multitask. I can also work quickly and efficiently. Having empathy is a good trait to have in a hospital setting, and I always treat others how I’d like to be treated.

Any tips?
Always keep an open mind. Keep your education up to date, work well with others, don’t be afraid to express your ideas and just have fun doing your job.

Where do you see your career going?
I love my job, and I hope to see more interest in the profession and more standardized laboratory workplace practices across the province. I also hope to be able to perform more lab testing in rural centres and to continue to provide the most necessary lab/X-ray results to our doctors.
DREAM JOB?
We can help with that.

Whether you are searching for that Dream Job or on the path to becoming qualified through University, Apprenticeship, College or other experience, GDI Training & Employment has a variety of programs to help Métis individuals along the way.

Saskatchewan Polytechnic not only develops curriculum in consultation with employers, but we ensure that it’s up-to-date and relevant through program advisory committees. About 700 representatives lend their expertise to these committees, which include employers, practitioners and grads.

THE POLYTECHNIC ADVANTAGE:
YOU’LL BENEFIT FROM OUR CLOSE RELATIONSHIPS WITH EMPLOYERS

saskpolytech.ca

for more information go to www.saskatooniec.ca/relevance
Medical diagnostic technology careers are divided into two areas: imaging and laboratory. We’ll look at careers you can train for here at home, mostly certificate and diploma programs at Saskatchewan Polytechnic, but also degree options at the University of Regina and University of Saskatchewan.

**Imaging Careers**

**Combined Laboratory and X-ray Technology (CLXT)**

CLXT is a cool program. It’s a 2-year diploma aimed at people who want to work in rural hospitals and health centres, although your skills qualify you to work anywhere. You’ll be trained in both routine medical lab tests as well as in X-ray and electrocardiography procedures. This broad skill set makes you an important part of the rural health team.

**Medical Radiologic Technology (MRT)**

MRT is a 2-year diploma program that provides hands-on training in the use of X-ray, computed tomography (CT) and breast imaging equipment. You’ll learn how to use high tech equipment, how to position patients to get the best images and how to critique images. MRTs work in hospitals, radiology clinics, cancer clinics, community health centres, private medical clinics and even veterinary clinics.

**Laboratory Careers**

**Cytotechnology**

Cytotechnology is another 2-year diploma program, but this one is focused in the laboratory. You’ll learn to study cells and cellular anomalies using a microscope and other lab equipment. The job is crucial to identifying infections, inflammations and cancerous or precancerous lesions, which is the first step in determining treatment plans.

**Medical Laboratory Technology (MLT)**

This 2.5-year diploma program will immerse you in a high tech, lab-based diagnostic environment. If you like solving problems, following procedures and working with lab equipment, this is a great career choice. Medical laboratory technologists (often called MLTs) work for regional health districts, government health agencies, educational institutions and in private and public labs.

**Medical Laboratory Assistant (MLA)**

Medical lab assistants work directly with patients and other health care providers. The job involves everything from collecting patient health information and medical specimens, to assisting with lab work. Sask Polytech’s one-year applied certificate program puts you on the fast-track for job opportunities in hospitals, clinics, medical offices, research labs, vet clinics and more.

**Phlebotomy**

Ever gone to the doctor and had a blood test? Well, the person collecting your sample is a phlebotomist. Phlebotomists are trained to draw blood from patients for use in medical tests. Sask Polytech offers a one-year applied certificate program through distance education. It’s a great way to open doors to job opportunities in regional health districts, government health agencies and private labs.

**Ladder into a Degree**

The CLXT, MRT, MLT and Cytotechnology diploma programs let you ladder into degree programs at the University of Regina or Athabasca University in Alberta. Several also let you take your degree through First Nations University of Canada, Campion College or Luther College.

The benefit is that you take your first 2 years at Sask Polytech, which offers smaller class sizes and more one-on-one interaction with instructors. Once you graduate, you can work for a few years or jump right into the third year of a four-year university degree program. Getting a degree in medical diagnostics can open the door to higher paying management and teaching positions.

**Earn while you learn ... while you serve**

Both the MRT and MLT programs at Sask Polytech are recognized by the Canadian Armed Forces, which means you could qualify for Paid Education funding. For information, visit forces.ca/en/paid-education.
**TOP 3 SOFT SKILLS**

**#1 Communication**
If you’re thinking that working in the lab or with technology means you don’t have to work with patients, rethink. Careers in medical diagnostics may not have the same level of bedside care as other health professions, but they do involve working with patients. Good communication and listening skills are a must.

**#2 Attention to detail**
This one is absolutely critical. Medical diagnostics is all about getting the details right. Physicians, specialists, patients and families are counting on you to deliver accurate imagining or lab results. That means attention to detail and commitment to accuracy.

**#3 Professionalism**
This helps you empathize with patients, while also maintaining high work standards and a positive attitude. Professionalism helps build trust between you and your patients.

---

**Helping Build Brighter Futures**

*Delivering skills training and adult basic education to Métis people*

**We Believe...**
- “Learners Come First”.
- in providing quality education.
- in striving for the success of every learner.
- in showing compassion and genuine concern for the accomplishment of all learners.

---

**THE POLYTECHNIC ADVANTAGE:**

**APPLIED RESEARCH OPPORTUNITIES**

Sask Polytech students are encouraged and supported by faculty to partner with business, industry and the community on applied research projects that provide real world solutions to today’s challenges. Participating in applied research gives you hands-on experience so you can transition seamlessly into your chosen career and position yourself as an employee of choice in today’s competitive job market.

HERE’S A TIP.
I applied for over 50 scholarships, and I got 6. That’s one of my tips for high school students—apply for as many scholarships and bursaries as you qualify for. You’ll get a lot of rejections, but you’ll also get some approvals to help you pay for your education.

– Jordyn Burnouf, Associate, Medicine Rope Strategies
Want practical info on hundreds of Saskatchewan jobs? Job Chart 2020 shows how much you could earn, what post-secondary training you need, what future job prospects look like, even what soft skills employers are looking for. Each listing includes:

**NOC CODE**
The National Occupational Classification (NOC) system is Canada’s go-to source for information on occupations. Use the four-digit NOC code to dig deeper into career options.

**JOB DESCRIPTION**
A summary of typical job activities. If you want to know more, talk to someone who does this for a living or visit jobbank.gc.ca/home.

**WAGE RANGE, ANNUAL ESTIMATES**
This information is based on full-time, 40 hours a week, full-year (52 weeks a year) wages and estimated using 2018 Job Bank prevailing hourly wages.

**NUMBER EMPLOYEES**
(2019 Estimate)
Why is this helpful? Jobs with a higher number of employees have more turnover, which means more job openings.

**PROSPECTS TO 2023**
Knowing future employment prospects in different occupations can help you plan for tomorrow. Job Chart offers three employment indicators.

- ★★★... Good
- ★★★... Fair
- ★★★... Limited

**SOFT SKILLS**
Today's employers want to know about your soft skills. Job Chart lists the most in-demand soft skills for hundreds of jobs.

**TRAINING AND EDUCATION**
This lists Saskatchewan institutions with programs relevant to each job. We’ve made every effort to ensure the information is accurate, but it’s up to you to check with the institution to verify program availability. This is a starting point; you may need additional training and/or transfer to another institution to meet professional, occupational or trade requirements.

University classes are available at all Saskatchewan Regional Colleges. Transfer agreements with the University of Regina, University of Saskatchewan and First Nations University of Canada let students complete one or more years of full-time university at a regional college close to home. For details, CONTACT THE INSTITUTION DIRECTLY.

**Note:** These indicators reflect employment opportunities over a five-year period, 2019 to 2023, based on current and future labour market trends.

You, School & MONEY

Financial survival tips for students.

Make a budget
A budget helps you stay on track with your spending. It’s one less thing to worry about when you’re already dealing with living on your own, paying bills (maybe for the first time), making new friends and balancing your class load.

Work part-time
If you can work a couple hours a week during the school year, great. The extra cash will help with living expenses . . . and mad money.

Make your own coffee
It’s amazing how much money you can spend at a coffee shop over a school year. Brew your coffee (or tea) at home and take it with you in a travel mug.

Get cooking
Eating out is fun, but pricey. Learn to cook a few simple meals at home and pack a lunch (and snacks) if you’re on campus all day.

Ride the bus
Cars are also fun, but pricey. It’s not just the gas, it’s your license, insurance (plates), parking and more. Simplify your life—hop on a bus.

Take advantage of free stuff
Your tuition might cover more than just your classes. It might include a bus pass, gym access, or any number of great perks. Use them!

Get more money tips at affinitycu.ca/banking/tools-and-resources/advice.

Plan Your Future

Saskatchewan’s Top 10 In-Demand Occupations Forecasted For 2019-23 (With post-secondary, technical and trades education or university degree)

1. Registered nurses and registered psychiatric nurses
   - $66,600 - $99,800

2. Administrative officers
   - $31,200 - $75,000

3. Elementary school and kindergarten teachers
   - $46,300 - $95,200

4. Administrative assistants
   - $32,000 - $62,400

5. Cooks
   - $23,000 - $45,800

6. Carpenters
   - $35,400 - $74,900

7. Accounting technicians and bookkeepers
   - $31,200 - $68,600

8. Automotive technicians and mechanics
   - $33,300 - $84,200

9. Financial auditors and accountants
   - $41,600 - $118,900

10. Social and community service workers
    - $33,300 - $71,300

Thriving in the Gig Economy

In this year’s Relevance, half of our peers and one of our two mentors are participating in the gig economy. In the gig economy, companies hire part-time workers, independent contractors and freelancers for short-term projects rather than full-time employees.

Non-traditional workers already make up to 30% of the workforce.
- Workforce 2025 The Future of the World of Work

A heads up—even though part-time jobs are a big part of today’s gig economy, that’s not our focus. We’re talking about building a career as a freelancer or independent contractor. That’s when you hire yourself out (as a carpenter, consultant, accountant, athlete, etc.) to do a specific job or handle a specific project. The work might be:
- long-term (e.g. project managing a construction project)
- short-term (e.g. doing a kitchen renovation)
- seasonal (e.g. working as a guide at a remote fishing camp)
- recurring (e.g. monthly bookkeeping)
- one-off (e.g. guest speaker at an event)

What does a gig career look like?
It’s up to you. Gig economy careers are self-made and self-directed. As a hair stylist, for example, you can be a salon employee (traditional economy) or you can rent a chair and build your clientele (gig economy). As an accountant, you can work for an accounting firm (traditional economy) or offer your services on a contract basis (gig economy).

These types of gig work have been around for decades. Technology has opened all kinds of new opportunities for gig work. In response, young people are pushing career boundaries in all kinds of innovative ways. Just look at our 2020 peers.

Michael Linklater just retired from a career in pro basketball. He also owns his own business, Prime Basketball Development, is a spokesperson for Nike N7 and a public speaker. Each job is its own gig. Some last longer, like a basketball season; others are one-offs, like speaking engagements.

Jordyn Burnouf left a permanent job with Northlands College to join Medicine Rope Strategies as an associate, where she lends her expertise on a contract basis. She’s also a 20/20 Catalyst with the Indigenous Clean Energy network and is working on a clean energy project in her home community.

Omayra Issa is a bilingual reporter for Radio-Canada/CBC, but she’s also growing a career as a public speaker. Just last year, she was invited to moderate a panel on Energy in Africa at the annual African Union Summit in Niger.

Pros & Cons

Pros:
- Be your own boss
- Flexible hours and work-like balance
- Manage your workload
- Focus on work you like
- Work remotely (no commute)

Cons:
- Need self-discipline, work routine
- Income can fluctuate month to month
- Lack of health & medical benefits
- Lack of paid vacation & sick days
- Miss team aspects of workplace

Austin Grass is pursuing a career in film. His day-to-day work life is a moving schedule of gigs on different movies, television series and commercials. He’s constantly networking to get the next gig, and each gig gets him closer to his goal of becoming a unionized camera operator.

Rachel Brockman, one of our 2020 mentors, was an associate professor before leaving to start her own company, Eureka Experience. Now, she delivers corporate leadership and communication experiences, while also serving as academic director of the Betty-Ann Heggie Womentorship Program.

Nurture your inner gigpreneur
Thriving in the gig economy is different than thriving in a traditional work environment. It comes with its own rewards and challenges. We found these 4 tips in the Harvard Business Review.
- Connect to a place: Almost all freelancers and contractors have a regular workspace. For some, it’s a home office or studio; for others, it’s the corner table at a local coffee shop.
- Connect to a routine: It’s great to have flexible hours, but you still need to earn a living. To do that, you need to be productive, and to be productive, you need a disciplined work routine.
- Connect to a purpose: For many, there’s a sense of wanting “something more,” some purpose that drives you to carve out your own career on your own terms. Try to identify this purpose.
- Connect to people: Working from a home office can be lonely. That’s why successful freelancers and contractors build their own network of friends, mentors, former co-workers, peer groups, etc.

Read the source article at the Harvard Business Review:
hbr.org/2018/03/thriving-in-the-gig-economy
After graduating with a degree in film production from the University of Regina, Austin set out on a wing and a prayer for Montreal. Since then, he’s worked in the camera department on indie films, true crime series and Hollywood movies like John Wick 2, XMen: Dark Phoenix, Pet Sematary and Midway. Recently, he’s been operating cameras on commercials for Jeep, BMW, Dodge Ram and Volkswagen.

When did you decide on film as a career?  
I remember the exact moment. I was 15, sitting on the couch, telling my mom all about Quentin Tarantino’s films. She said, why don’t you think about that as a career option? I had never even considered film an option, but that was it, that’s when I decided.

Were you a creative kid?  
I was into art, drawing and being creative. In high school, I applied and got into a media school program. That was the first time I was really interested in school. It gave me a chance to be creative and use my brain the way I felt I should.

Why a camera operator?  
After high school, I enrolled in Film Production at the University of Regina. They don’t train you for specific jobs in film; instead, you learn about all areas of film production. My experiences in that program helped guide me into the camera department.

Did you get work experience?  
My first experience as a camera operator was when I volunteered for a 2-hour shift at a telethon. That led to a 1-day job pulling cable behind a camera operator, which led to a camera operator position for sports events. I also did a short film for a class project on an Edmonton artist named Chad Baba, which I sold to the CBC.

How did you get your first “real” job?  
The head of the U of R film department told me a film was coming to town and needed camera trainees. I immediately called the contact and sent them everything I’d worked on. I would have accepted a job picking up cigarette butts to get on my first production. But I was lucky enough to join the camera department—the department I was most interested in.

What was the film?  
The Stakelander. It’s still one of the best experiences of my life. I had built up in my head what being on set would be like, and it surpassed my expectations. It was 20 working days, or about a month, and every day I got to work, I would think, wow, I can’t believe I get to do this for a job. I still feel that.

How do you grow a film career?  
Being willing to take risks, being available for work, making connections—I’m always making connections. Working on a true crime series, I bumped into a guy with a cool licence plate in Los Angeles. We got talking, and it turns out he’s the head of the sound union in Hollywood. Now I’ve got a contact in Hollywood.

Any tips on making tough decisions?  
My ultimate goal is to be a unionized camera operator, so I look at jobs that are the closest thing to that, or jobs that can get me another step closer to that future. My tip is to play your career like chess, where you’re always looking a couple moves ahead.

Best career advice?  
Make sure you let everyone know your goals. The more people that know what you want to do, the more chances you have of that person coming back to you with an opportunity or telling someone else who might have an opportunity.

CHASING A CREATIVE CAREER?
- University of Regina offers film, music, theatre, creative technologies and visual arts, uregina.ca/mediaartperformance.
- University of Saskatchewan offers drama, fine art and music, artsandsscience.usask.ca.
- First Nations University offers Indian Communications Arts and Indigenous Fine Arts, fnuniv.ca/a-programs.
- Saskatchewan Polytechnic offers graphic design, website design, interactive media and media production, saskpolytech.ca/about/school-of-information-and-communications-technology.
- Recording Arts Institute of Saskatoon offers audio engineering, filmmaking and 3D animation, rais.ca.

for more information go to www.saskatooniec.ca/relevance
The U of R is now accepting applications for the Fall 2020/Winter 2021 semesters.

To apply or learn more about the University of Regina, visit urconnected.uregina.ca

WHY CHOOSE U OF R?

- 150+ Number of programs to choose from

- $6.5 MILLION Scholarships and bursaries awarded last year

- 0 Number of other Canadian Universities that offer a Guarantee Program like our UR Guarantee

- $12,000 Average Co-op earnings per 4-month internship. Nearly every program has experiential learning opportunities!

Raegan Pollard
“I’m comfortable with change.”

One of the things Raegan likes most about her career as a senior project manager with Graham Construction is that the job is constantly changing—she’s comfortable with change. That’s why she signed up for an 8-month volunteer stint with Engineers Without Borders while at university. And why, after graduating from civil engineering, she “crossed the pond” to work as a site engineer in London, England for three years.

Why engineering?
My whole family is in the construction industry—my dad and grandpa owned a construction company. It also helped that seven of my friends went into engineering; six guys, mind you, I was the only girl.

Is it as tough as they say?
The first year was really hard. I actually took a year off and worked as a ski lift operator in Lake Louise while I considered other careers. I wasn’t used to having to study. I applied to optometry and got in, but then I thought I’d be bored, so I stayed in engineering.

Are you easily bored?
I don’t know about that, but I like change. That’s one of the things I like about project management—you work on a project for a couple of months or years, and then you move on to something else. And while you’re on a project, it’s constantly changing.

Why get involved in EWB?
I was fortunate to have the opportunity to go to university and felt it was important to give back. Through Engineers Without Borders, I worked as a site engineer on a CIDA-funded project in Kenya. It really gives you a wider perspective and experience.

First post-uni job?
I went to England right after I graduated. I worked for AMEC for three years as a site engineer on the Docklands Light Railway project in London. We were working on building two tunnels under the river in East London. When that was done, I worked for another company on a highway project in Leeds. I came back to Saskatoon in 2008.

Biggest challenge of the job?
On some projects, you’re working 60 and 80-hour work weeks, so it can be intense. There can be a lot of pressure, because people are waiting on you to make decisions. And you have to juggle a lot of tasks— scheduling, work planning, tracking, ordering.

Does it involve travel?
Yes, that’s the other thing. You have to be willing to travel, because most project management jobs need you onsite. I’ve worked on projects from one end of the province to the other. Be ready to spend the first five years of your career on the road or out of town.

Favourite project?
I was project manager on the two new bridges in Saskatoon. It was nice doing a public infrastructure project in my hometown.

Key skills in project management?
Communication. Communication affects everything and everyone involved in a project. Being able to take feedback without taking it personally is part of that, and so is getting people to see other options.

Any advice for students?
You have to be where the jobs are, so expect to put in the time on the road. But use that time to get as much field experience as you can, because you won’t understand things as well if you’re in an office.
When it comes to safety at work, speak up!
Grant Barnsley was just 19 when his life did an alarming 180. At the time, he was an eager apprentice machinist in Regina helping load a heavy hydraulic cylinder onto a flatbed truck. When the apparatus that was supporting the cylinder broke, the cylinder suddenly came crashing down on Grant’s knees. A week later, his right leg had to be amputated from the mid-calf down.

Grant had been on the job seven months and had received no orientation in safe operating procedures, he says. He’d just wanted to please his boss.

That was 32 years ago and while safety awareness has increased in Saskatchewan, young workers are still getting hurt. Every year, about 3,600 youth in the province are injured on the job and three die in a workplace incident.

Know your rights
As Grant can tell you (he’s now an occupational health and safety officer with Saskatchewan’s Ministry of Labour Relations and Workplace Safety), you have three basic rights under Saskatchewan employment law:

1. The right to know the hazards in your workplace and how you can prevent injuries from those hazards. It’s your employer’s responsibility to provide orientation and safety training so you don’t get hurt.

Some hazards are obvious, such as working with knives or hot oil if you’re in the food service industry. Others are hidden hazards and include:
* Excessive noise. Noise-induced hearing loss is painless and often gradual, but it’s permanent. It’s a hazard for construction and machinery workers, as well as for people who work in other loud environments, such as restaurants and athletic centres.
* Asbestos exposure. Breathing in asbestos fibres can cause serious illnesses, such as lung cancer, later in life. You’re most at risk if you’re renovating or demolishing a building erected before 1990, when asbestos was used in many residential and commercial building materials.
* Hazardous products and chemicals. Improper use of these agents can result in nausea, headache, blurred vision and laboured breathing.

2. The right to participate in health and safety activities in your workplace.

3. The right to refuse work you believe is unusually dangerous. Listen to your gut. If a task seems unsafe, such as removing shingles in high winds or driving a forklift with a flat tire, speak to your supervisor about why you’re concerned. By law, your employer can’t discipline you for refusing to do risky work.

Know your responsibilities
Ensuring workplace safety is a shared responsibility. As a worker, you have the responsibility to:

- Properly use or wear protective devices
- Not remove a safety guard or device
- Use machinery and equipment properly
- Report health and safety concerns, including unsafe activities and conditions
- Ask questions if you’re unsure of how to do something safely
- Protect yourself and others from harm as much as possible
- Not harass others at work

Tap into online safety tools
Want to find out more?

- If you’re between the ages of 14 and 21, you qualify for free Career Safety Education offered by the Saskatchewan Safety Council. You’ll not only learn about safe practices on the job by completing the courses, but you’ll also have one more accomplishment to add to your résumé.
- If you’re 14 or 15 and want to work, you’ll need to complete the Young Worker Readiness Certificate Course before starting a job.
- Check out Worksafesask.ca/youth for more resources.

2018 youth injuries by the numbers

6% of workers under the age of 25 are injured every year in Saskatchewan
30% of these injuries are hand injuries
26% of these injuries are leg and back injuries
18% of these injuries are arm and head injuries
100% of these injuries could have been prevented

1. This is an estimated youth injury rate, based on full-time equivalent (FTE) estimates using data from Statistics Canada. Table 282-0087 – Labour force survey estimate (LFS), by sex and age group, seasonally adjusted and unadjusted, monthly (persons unless otherwise noted). Since not all workers in Saskatchewan are covered under the Workers’ Compensation Board (WCB), the actual percentage of youth workers under the WCB may be slightly different. Additionally, percentages from Statistics Canada are based on number of workers, not FTEs.
You have the right to:

1 **KNOW** the hazards at work & how to protect yourself.
2 **PARTICIPATE** in health & safety activities at your work.
3 **REFUSE** work which you believe is unusually dangerous.

To report dangerous work in progress, call Occupational Health & Safety at **1.800.567.7233**

**QUESTIONS** about work fairness, work hours, breaks or pay? Call Employment Standards **1.800.667.1783**

**6 Fascinating Facts About Tourism Employment**

The tourism sector is composed of five industries: accommodation, food and beverage services, recreation and entertainment, transportation and travel services. Many businesses in these industries serve both tourists and residents of local communities.

**Who works in the Saskatchewan tourism industry?**

1 **63,800** Saskatchewan residents were employed in full- and part-time tourism-related jobs in 2018. That’s 11.2% of total employment in the province.

2 Three in five people working in Saskatchewan’s tourism sector are in full-time positions.

3 **31%** of people in tourism-related employment are youth between 15 and 24 years old.

4 Indigenous people make up 13.1% of tourism employees. Of those, 21% work in the recreation and entertainment industry.

5 **28%** of Saskatchewan tourism employees are immigrants or non-permanent residents.

6 The food and beverage services industry is the largest employer among tourism businesses, accounting for nearly half of tourism jobs.

Visit Ali’s LinkedIn page and you’ll find this Margaret Mead quote: “Never doubt that a small group of thoughtful, committed, citizens can change the world. Indeed, it is the only thing that ever has.” When you talk to Ali, you quickly discover that this quote neatly sums up the career path he’s chosen.

What do you do?
I’m Chief Executive Officer of the Saskatoon Open Door Society, which provides programming for refugees and newcomers to Saskatoon and Canada. I have a background in social work, migration and refugee studies and business administration.

Why this career?
I’ve lived the refugee and newcomer experience, and I’m passionate about influencing and impacting bigger systems. The supports we have put in place at the Open Door Society weren’t there for me, but it would have been so helpful—that continues to influence my career path.

Where did you grow up?
I was born in Somalia but left when I was young. At 18 I went to Egypt as a refugee. Egypt doesn’t have the financial resources to support refugee services, but I was lucky to have family members in Europe who helped me with living expenses and education.

How did you decide on this career?
I started by getting an advanced certificate in English, which allowed me to tutor and work as an interpreter/translator. I enrolled at the Arab Open University, where I got a degree in business administration. That’s when I started to have a better idea of my future.

How so?
I didn’t want money to be my focus. I wanted to use my degree to create social change, and I realized I could use my skills in non-profit organizations (NGOs) to help do that.

When did you come to Canada?
In 2011 as a privately sponsored refugee. In Canada, privately sponsored refugees are resettled refugees.

That means my application was approved in Egypt and I arrived in Canada as a permanent resident. The relative who sponsored me provided financial support and settlement assistance for a year, and because I was a permanent resident, I could apply for student loans.

What was your goal?
I was already focussing on refugee advocacy work in Egypt and had earned a graduate diploma in psychosocial interventions for migrants and refugees from the American University in Cairo. I enrolled in the Master of Social Work program at Wilfred Laurier University. As part of the program, I did an international practicum in Kampala, Uganda, where I met my future wife. I graduated with my MSW in 2013.

How was the job hunt?
It was a struggle. I graduated in June and had applied for more than 50 jobs by September. I was really discouraged. Finally, I got a job as a settlement support worker in schools with the Saskatoon Open Door Society in late 2013. After four months, I was promoted to team leader and then to chief executive officer in 2015.

Where would you like to be in 10 years?
I would love to work internationally, especially in developing countries. I’ve always dreamed of starting an NGO. However, I have a 5-year contract with the Open Door Society, and an established family here, so we’ll see.

Any advice for students?
Work hard in school, because by the time you’re figuring out what you want to do in post-secondary, your earlier success will have opened doors for you. It’s harder if you don’t have the right marks.

IS SOCIAL CHANGE YOUR CAREER FOCUS?
Here are several post-secondary education options. First Nations University of Canada’s certificate and degree programs in Indigenous Social Work emphasize work with First Nations individuals, families and communities, fnuniv.ca. University of Regina’s Bachelor of Social Work is offered at Regina, Saskatoon and Prince Albert campuses as well as through regional colleges, uregina.ca/socialwork. University of Saskatchewan’s Sociology program focuses on social structure and human interactions, artsandscience.usask.ca/sociology. Saskatchewan Polytechnic’s Youth Care Worker program prepares you for jobs in educational, residential, social services or community-based agencies, saskpolytech.ca/programs-and-courses/programs/Youth-Care-Worker-Certificate.
9 Tips to Stress-free Virtual Interviews

1. Prepare as you would for a traditional interview. Do your homework; research the company and prepare answers to expected interview questions.
2. Dress the part. Dress just like you would if you were being interviewed in person.
3. Choose a quiet location. If you’re at home, make sure other people and pets are kept quiet.
4. Choose a visually neutral background. Go for a subdued, neutral colour with minimal artwork/photos. Ensure some contrast between your clothes & the wall colour.
5. Test your lighting. Do a test call with a friend to ensure you’re not sitting half in shadow or half in glaring sun.
6. Check your sound. Check your sound quality and volume while you’re doing the test run with your friend.
7. Ensure a strong internet connection. If your home wifi is iffy, set up your video chat in a place with a strong internet connection (your parent’s house or school).
8. Look at the camera. Look mostly at the camera, but alternate looking at the face on the screen to ensure you’re making “eye contact.”
9. Check your battery. If you’re connecting from a laptop or other mobile device, ensure your battery is fully charged.

Adapted from Life Strategies. For the full tip sheet, visit https://lifestrategies.ca/resources/tip-sheets.cfm.
Want to know what a successful athletic career looks like? Ask Michael. He’s got a list of awards for 3x3 basketball as long as your arm, was a member of the CEBL 2019 Championship Saskatchewan Rattlers, is the new face of Nike N7, founder of Boys with Braids, owner of Prime Basketball Development and a popular public speaker. We chatted on Facetime while he was in Budapest speaking at the World Urban Games.

What attracted you to basketball? I fell in love with the game the first time I played. I started on the school playground, got into community basketball and was recruited to high school. I was bumped up to the junior team in Grade 9 and then tried out for the Saskatchewan provincial team. I was cut in Grades 9 and 10, selected in Grade 11, then cut again in Grade 12.

How did you handle being cut? When someone tells me I can’t do something, I have to prove them wrong, so I worked on my game to prove I was good enough. I guess it’s the fighting spirit my great aunt instilled in me.

Your great aunt raised you? Yes, I’m nehiyaw (Cree) from the Thunderchild First Nation in Treaty 6 Territory. My mom was part of the 60s Scoop. I was born in Trenton, New Jersey because that’s where my mom was adopted to, but I was raised in Canada by my great aunt and uncle, Maria and the late Walter Linklater.

What did family teach you? To speak our mind and use our voice. My aunt and uncle had their spiritual and cultural identity stripped from them in residential school. They had to fight to keep their ceremony and culture, so they understand the significance of rediscovering your culture and making sure you pass it down to future generations.

Have you dealt with racism? I got a lot of name calling from crowds during my playing career. I learned at a young age that it was ignorance; if these people took the time to learn about my culture, they would see how beautiful it is. That’s why I started Boys with Braids. It’s a social media platform for parents and boys who face teasing in school because of their braids.

Did you play university basketball? I played for several different colleges, then played my last year at the University of Saskatchewan. I was team captain when we won the CanWest Conference Championship and the team’s first CIS National Championship.

How did you start your 3x3 career? I entered a 3x3 challenger tournament in Edmonton. We won and advanced to the FIBA 3x3 World Tour. I played seven seasons on the world tour and captained Team Saskatoon at several FIBA 3x3 World Tour Finals.

Has it been a good career? I’ve had a wonderful experience in my career in 3x3. A lot of folks think that if you don’t make the NBA, what’s the point. But I represented Canada at the 2018 World Cup (we placed 6th) and the 2019 World Cup qualifier. When you’re passionate about something, follow that passion and it will take you where you want to go.

Any advice for young people? It’s important to understand that we’re the only ones stopping ourselves from achieving what we want. If we make the excuse that we can’t, it’s on us. There are people out there willing to help, especially when they see you’re passionate. Find those people, find solutions so you can go after what you want.

3x3 basketball is played three to a side on one basketball hoop. The FIBA 3x3 World Tour is a global network of tournaments. Any group of players can qualify by winning regional tournaments. Learn more at FIBA.com/3x3WorldTour.
5 Rules for Avoiding Online Job Scams

**Rule #1 – If it sounds too good to be true ... it is.**
Jobs that offer a lot of money for little effort are scams. You’ve probably seen ads, like “earn $7,000 a month for working from home!” Scammers are hoping you’ll apply and give them your bank or credit card information. Don’t take the bait.

**Rule #2 – When in doubt, check it out.**
If you see a job you like on a job search site, always, always, always check it out. Don’t use the link on the posting. Do your own online search of the company name. Learn what the company does and where it operates. Listen to your spidey senses; if it doesn’t feel right or look right, steer clear.

**Rule #3 – Never, ever pay money to apply for a job.**
No matter how legit a job seems, if a job posting or recruiter asks you to pay upfront money for training materials, application fees, online training ... run.

**Rule #4 – Never, ever give bank or credit card information.**
Ever.

**Rule #5 – Tell everybody.**
The online job search can be lonely. Talk to your friends and family about your experiences. And if they offer a word of caution about something you’re excited about, be open to listening. Revisit rule #2.

From a carefree rural childhood, to being a carnie in Australia, to raising a family while getting her MBA, to teaching a new generation of business leaders, Rachelle has embraced the diverse experiences of her life and used them to fuel her career. Today, she inspires people, teams and organizations through her company, Eureka Experience, and as academic director of the Betty-Ann Heggie Womentorship Program at the University of Saskatchewan.

Where did you grow up?
On an acreage north of Prince Albert. My family is Metis; my dad was a corrections officer and my mom was a hairdresser. I remember the freedom of exploring with my brothers, going out to pick mushrooms and herbs, roasting bannock over a fire, doing chores.

Did you know what you wanted to be?
In high school, I wanted to be an artist or a hairdresser. But the practical side of my brain thrust me back into the world of being responsible, because I wanted to be independent. Even at 18, I was able to think big picture.

Why university?
My guidance counsellor was the one who suggested university—I’d never even thought about it, because no one in my family had gone. Money was a barrier, so she suggested I apply for a scholarship. I got a scholarship to the College of Commerce (my math teacher was a huge mentor in high school) and went off to university.

Did you know what you wanted to be?
In high school, I wanted to be an artist or a hairdresser. But the practical side of my brain thrust me back into the world of being responsible, because I wanted to be independent. Even at 18, I was able to think big picture.

Where did you grow up?
On an acreage north of Prince Albert. My family is Metis; my dad was a corrections officer and my mom was a hairdresser. I remember the freedom of exploring with my brothers, going out to pick mushrooms and herbs, roasting bannock over a fire, doing chores.

First job?
I worked at a bank. But I married and started a family young, so when they transferred me to Estevan, I made the decision to stay home and raise my girls. That was awesome. At the same time, I still wanted to do something for my future, so I got my MBA part-time.

Any defining experiences in school?
Many, but one stands out. In my MBA leadership class, I learned that we do things, not to honour our true selves, but to be accepted. We strive for perfection but never find true success. I only truly understood this during the 5-hour final exam, which was all multiple choice. I had this “eureka” moment of total clarity—it was my final class and all I needed to do was pass to get my MBA. I didn’t need the high marks I was normally driven to get. So, I answered everything I could and handed it in 20 minutes later. My hands were shaking when I walked out.

Did you pass?
I got 51%. I’m not proud of that mark, even now. But, my professor called two weeks later and offered me a job as a sessional lecturer in the leadership class. That led to other amazing opportunities; I was an assistant professor when I left 11 years later.

Any career advice?
Personally, I don’t like the idea of planning a career. I think of it more as paying attention, seeing the opportunities and taking action. It’s cliché, I know, but still true. Pay attention to life around you, then go with what catches your interest.

WANT TO BE A BUSINESS LEADER?
It’s never too soon to start developing your business leadership skills. Sign up for business clubs in high school. Build your skills with post-secondary education in business programs at a regional college, Saskatchewan Polytechnic, Saskatchewan Indian Institute of Technologies, First Nations University of Canada, University of Regina or University of Saskatchewan.

Explore these sites for events and resources especially for young entrepreneurs: Business Development Bank of Canada (bdc.ca), Community Futures Saskatchewan (cfsask.ca), Futurpreneur Canada (futurpreneur.ca), Saskatchewan Young Professionals and Entrepreneurs (sype.ca), Saskatchewan Young Ag-Entrepreneurs (saskyoungag.ca) and Women Entrepreneurs of Saskatchewan (womenentrepreneurs.sk.ca).

“Learn to say yes to opportunities. Look at what the world is showing you and listen to that.”

Rachelle BROCKMAN
“Pay attention to see the opportunities.”

48 relevance 2020
Neal KEWISTEP
“Own your identity.”

Neal was one of our peer profiles in 2017. This year, he’s back as a Relevance mentor, sharing his experiences and reflections on building a successful career while staying true to your identity.

What’s your new job?
I’m an Executive-in-Residence at Johnson Shoyama Graduate School of Public Policy. I facilitate and deliver Indigenous leadership and governance training to students, faculty and others. I also co-teach some of the graduate and executive education classes and mentor students.

What’s your educational background?
I have a bachelor’s degree in Indigenous Studies from First Nations University and a Master of Public Administration (MPA) from Johnson Shoyama. But the most influential part of my training comes from my elders, who taught me the traditional First Nations role of a servant leader. My traditional training has as much relevance as my degrees.

Did you plan out your career?
It’s more that I had an idea of what kind of career I wanted. I had a good job in Alberta but I wanted to come home, so I took a risk and took a lower position with Saskatoon Health Region as manager of the Building Health Equity Program. That leads me to my first piece of career advice—when you’ve come to a decision, jump in with both feet.

Define “jumping in”?
Give it your all. I took a risk but gave it my all, and I was rewarded for that effort. I kept climbing the career ladder. Within five years, I had risen to Director of Population Health with the Saskatchewan Health Authority. I still wanted to shift into more direct work in my home communities, so when Johnson Shoyama approached me about joining the team, I thought it was a good time to grow in other ways.

Any doubts?
Many! What if I’m not successful? What if I’m not good enough? What if no one likes me? It’s so easy to talk ourselves out of opportunity, especially early in our careers. That’s my second piece of advice—talk to people you trust, because they’ll point out the positives—what if it’s the best thing that ever happened to you?

What is your leadership “style”?
The traditional role of servant leader, which I inherited from my father and grandfather. I’ve actually come across the servant leader style in textbooks. That enlightened me to the fact that there was intent in the time my father and grandfather spent teaching me.

How is Indigenous work culture different?
One example is that in Indigenous culture, we plan for seven generations ahead. For example, it’s our responsibility to leave the environment the same or better than when we took over. Why plant a tree when I won’t taste the fruit or enjoy the shade? Because someone will—our children, grandchildren and great grandchildren. That same value can be transferred to other areas of life and work. It’s not just language and culture, it’s how we carry ourselves, where we rest our feet. As an Indigenous leader, I’ve come to understand our stewardship role.

Advice for young people?
In the Indigenous experience, especially the urban experience, there’s a lot of collective trauma. The human inside you can’t help but be affected by it. Because of that collective trauma, there’s also a sense of collective shame. Give yourself permission to leave that shame—it’s not yours to carry. Celebrate the positives, all the things you’re proud of.

WANT A CAREER IN PUBLIC SERVICE?
There are hundreds of public service (government) jobs, each with its own educational path. If management in public service is a career goal, consider a post-secondary business program.

• First Nations University provides a good foundation in all things business, plus online certificate programs in Indigenous Management, Economic Development and Reconciliation Studies, www.funuiv.ca.

• University of Regina and University of Saskatchewan offer diploma and degree business programs. Sharpen your focus (and your resume) with certificates in Local Government Administration, Political and International Governance and more, uregina.ca/business, admissions, usask.ca.

• Saskatchewan Polytechnic offers certificate, diploma and post-graduate certificate programs in business, with management as one of several specialities, saskpolytech.ca/about/school-of-business.
Got plans for tomorrow

...and tomorrow after that?

Still in high school and just starting to think about career options? Or maybe you already know exactly what you want to be. Job search sites are a great way to explore possible careers. Go to any site, type in the type of job you’d like (e.g. “engineer,” “farmer,” “manager”) and see what comes up. You’ll get insight into the kind of wages, responsibilities and work environments your “maybe” career offers.
